BLUNT
Full Range of Blunt Umbrellas available for order
BLUNT’s revolutionary RADIAL TENSIONING SYSTEM (RTS) creates an unflappable, aerodynamic weather canopy. It has been proven in winds way beyond the capability of any conventional umbrella. And its uniquely hard-wearing design means it will be a pleasure to use, year after year.

HOW IT WORKS

The RADIAL TENSIONING SYSTEM (RTS™) redirects, transfers and distributes the effort used in opening the umbrella throughout the entire canopy surface. The RTS™ creates a strong, aerodynamic umbrella with no sharp points - the BLUNT™ umbrella.

1. DOUBLE STRUTS REDIRECT

As the BLUNT™ canopy unfurls, the additional DOUBLE STRUTS redirect the user’s effort into the specially designed FLOATING RIBS.
2. FLOATING RIBS TRANSFER
The FLOATING RIBS are telescopic, and reach out like fingers stretching into a glove. They transfer the opening force into the patented BLUNT™ TIPS on the end of each rib.

3. BLUNT TIPS DISTRIBUTE
The BLUNT™ TIPS open like miniature umbrellas in their specially designed pockets, evenly distributing the tension right to the edge, where it is most needed.

PERFECTION OF DESIGN, MATERIALS, BUILD AND QUALITY CONTROL
BLUNT™ is re-imagining, redesigning and evolving the umbrella from first principles. Every new component is specified for peak performance, painstakingly constructed, and comprehensively checked. This ensures the umbrella in your hand is true to our original vision, and the best of its kind in the world.

*Every BLUNT™ goes through an independent extensive 38 point quality check before it reaches our customers.*
THE FINISHING TOUCHES

Every detail of a BLUNT umbrella is carefully and individually considered, from the way the TPR handle is shaped to fit snugly into the hand, to the design of the protective gift tube each product is shipped in.
POINT OF SALE DISPLAY

There are 2 POS Display stands available for displaying Blunt umbrellas in a retail or tradeshow environment.

- The counter display holds six collapsible BLUNT umbrellas and one tube.
- The floor standing Silicon base holds six stick BLUNT umbrellas and one tube.

Full Range of Ginkgo Umbrellas available for order
FLEXIBLE

The Patented Geometry allows the stretchers to resist strong winds by elastically flexing. The hinges are designed to last for thousands of open-close cycles.

ONLY 20 PIECES

The number of Ginkgo components has been considerably reduced, from the traditional 120 pieces to just 20. The assembling procedure needs no screws or pivots, as all the couplings are obtained by long-lasting and reliable snap-fit joints. With few components there is minimal chance of failure, and the design is favourable with production done by injection moulding.

100%PP

Polypropylene is found everywhere in everyday life. It has been chosen for Ginkgo as it is among the lightest plastic materials whilst being extremely resistant to mechanical stress and chemical agents. At the same time it ensures flexibility to the stretchers and the joints, strength and rigidity to the pole. And of course it is completely recyclable.

A COMPACT UMBRELLA
REDESIGNED FROM SCRATCH
3 Ways to make an eco-Umbrella

1. Substitute broken parts
2. Bio-polymers
3. Cradle to Cradle with a recovery system

PROBLEMS

with normal Umbrellas

Umbrellas on the market today are theoretically made of recyclable materials such as metal, plastic and wood. However, they can’t be recycled as they are. They’d need to be disassembled to be properly disposed of, which means that most of them just end up going to landfills... a big waste of resources. They polyester canopy, as an example, takes up to 100 years to biodegrade. Assuming a mass of 240g of metal per umbrella, every year 240,000 tons are completely wasted. It would be enough to build more than 25 Eiffel Towers every year.

SUSTAINABLE

Ginkgo is made entirely in a single material. All the parts, from the canopy’s fabric to the pole, are made from polypropylene. All the fastening elements, such as screws, pivots and especially glue, have been replaced by integrated snap-fit elements. Thanks to these solutions, when Ginkgo finally reached the end of its useful life you can just toss it in the recycle bin. No need to disassemble the components.

Closing the loop

Since all the components are made by injection molding, Ginkgo is ready to be made in a cradle-to-cradle system, where all the material is completely recovered at the end of the product’s life and reused to produce it once again.

Bluetooth Speaker

**SPECIFICATIONS:**

- Input Working Voltage: DC 6V
- Battery: Alkaline Battery *4pcs (1.5V), Rechargeable Ni-MH Battery *4pcs (1.2V)
- Working Time: 5 hours for alkaline battery, 2 hours for Rechargeable Ni-MH Battery (1000mAh)
- Maximum Working Current: 350mAh (Max VOL)
- Charging Current: 200mA
- Charging Time: 6 Hours
- Bluetooth Power: Class 2
- Receiving Distance Range: 10 Meters
- Bluetooth IC: CSR (RG-BT10-13)
- Support: Bluetooth V2.0; V3.0; V4.0
- Sound Frequency: 20-20KHz
- Rated Output Power: 2pcs*2W
- Speaker SPEC: Antimagnetic 4 OHM; 3W*2PCS

**Qty Per Carton:** 1 Units

**Carton Dimensions:** 24.5 x 19.5 x 8.5

**Branding Terms and Conditions**

Acceptable artwork/logo file formats:
- Vector formats are preferred: CDR (Corel Draw), AI (Adobe Illustrator), and vector PDF.
- Artwork/logo formats must be PC compatible.
- All fonts need to be converted to curves to avoid font substitution, or supply the font required.
- Include font and font sizes if typesetting is required.
- Pantones need to be supplied or we will match the colour as close as possible, in this case ST Umbrellas CANNOT be held responsible for colour variations.
- Word Docs, GIF’s, Bitmaps, JPEG’s and PowerPoint formats will NOT be accepted.
- If artwork is not received in the correct format, layout may take up to 48 hours to redraw.
